

# OPTIONS FOR THE 4000 SERIES STAND-UP COUNTERBALANCED TRUCKS

Moving product quicker and easier is not only desired, it is necessary to keep up with consumer demands and the evolving warehouse landscape. Our Stand-Up Counterbalanced Lift Trucks offer comfort, durability, and versatility with a wide range of options available to assist new and experienced operators achieve greater productivity.

## OPERATOR ASSIST

**LOAD WEIGHT DISPLAY** – Communicates the load weight being handled on the forks via the truck display to assist the operator in understanding the heights that the particular load could be lifted to and or stored at, increasing operator awareness.

**FORK TILT LEVELING** – Automatically positions the forks perpendicular to the mast with the touch of a button to more quickly and accurately engage loads.

## OPERATOR CONFIDENCE

**OPERATOR COMPARTMENT SENSOR SYSTEM** – this training aid reinforces the need for the operator to assume and maintain a proper operator position. When the sensors are blocked or the beams are not seen or emitted, a tone sounds, a message scrolls on the operator display, and the truck will decelerate to a stop if traveling

**TRAVEL, SPEED CONTROL** – This configurable option limits the truck travel speed to a preset value between 1 and 6 mph when the forks exit free lift.

---

## PROTECT YOUR GOODS AND FACILITY

**VANTAGE POINT™ SYSTEM** uses a camera, mounted under the forks, to offer the greatest clarity and widest field of view on the market for more precise pallet storage and retrieval at height.

**FORK-TIP LASER GUIDE** projects a high-visibility red or green laser line at the height of the truck's forks for precise pallet engagement and greater operator speed, accuracy, and confidence.

**MAST LIFT LIMIT SWITCH WITH BYPASS** cuts the lift function once a pre-programmed height is reached, reducing truck, product, and facility damage. Extending beyond the programmed limit, requires the bypass switch be activated while the standard lift control is activated, requiring operator engagement.

# TOOLS AND SERVICES DESIGNED TO BOOST PRODUCTIVITY

At Raymond, we take the time to focus on your equipment utilization, labor efficiencies, and space optimization before recommending one of our solutions. This approach helps you to uncover hidden inefficiencies, resulting in cost savings that can then be used to reinvest in your operations. Take advantage of our industry-leading services to drive you to where you need to go.

## **SAFETY ON THE MOVE®**

Our forklift operator training program, Safety on the Move®, is a comprehensive, modular online training program that can be customized to meet the needs of new or seasoned forklift operators while instilling best practices to maximize your lift truck operation for greater accuracy and efficiency through every shift.

Further improve operator confidence, retention, and skills, with our Virtual Reality Simulator that offers unique features and benefits to enhance learning and improve performance for forklift operators of all skill levels. This exclusive system places operators on an actual Raymond forklift, working with the exact equipment and controls they'll be using on the warehouse floor, increasing efficiency.

Incorporating iWAREHOUSE, our fully customizable fleet management system, will provide integrated intelligent forklift telematics for insight into your operations. With real-time, critical information such as key and deadman hours, fault codes, and impact data you can more easily understand truck and operator utilization to improve productivity.

From initial consultation to long-term support, we offer an unmatched depth of products and services to get you from where you are to where you want to go.
